CHAPTER 7—VALUATION OF STOCKS AND CORPORATIONS - 00377068

The stock valuation model, P 0 = D 1 /(r s? g), can be used only for firms whose growth rates exceed their required returns. e . If a company has two classes of common stock, Class A and Class B, the stocks may pay different dividends, but under all state charters the two classes must have the same voting rights .

CHAPTER 7—VALUATION OF STOCKS AND CORPORATIONS - 00377073

7. Yes. If the dividend grows at a steady rate, so does the stock price. In other words, the dividend growth rate and the capital gains yield are the same. 11. Presumably, the current stock value reflects the risk, timing and magnitude of all future cash flows, both short-term and long-term. If this is correct, then the statement is false.
