Rhodes (Richard) Dark Sun Summary

The 1260 days, or years, terminated in 1798. A quarter of a century earlier, persecution had almost wholly ceased. Between these two dates, according to the words of Christ, the sun was to be darkened. On the 19th of May, 1780, this prophecy was fulfilled. It was not an eclipse. Timothy Dwight says, "The 19th of May, 1780, was a remarkable dark ...

Dark Sun is a campaign setting made for AD&D 2nd edition back in '90; there are 3e conversions approved by WotC, but we had to wait until 2010 and 4e for an updated official version. Dark Sun is essentially a grimdark post-apocalyptic mix of D&D, Edgar Rice Burrough's Mars series, and Dune ; it's pretty awesome , but immediately proceeds to eschew common sense (unlike Dune).

The Sun is a star. There are lots of stars, but the Sun is the closest one to Earth. It is the center of our solar system. The Sun is a hot ball of glowing gases. It keeps our planet warm enough for living things to thrive. It gives us light so we can see. Eight planets move around the Sun. We call that an orbit.

Overview | Sun - NASA Solar System Exploration

Sunspots are areas that appear dark on the surface of the Sun. They appear dark because they are cooler than other parts of the Sun's surface. Solar flares are a sudden explosion of energy caused by tangling, crossing or reorganizing of magnetic field lines near sunspots. The surface of the Sun is a very busy place.

Dark Sun was based on a concept developed for the BATTLESYSTEM (tm) tabletop wargame system. Originally called "War World," the basic idea was to provide a setting in which everyone could fight everyone else. A "grim darkness" in which there was "only war," if you will.

Dark Sun: Campaign Setting by Timothy B. Brown

One explanation for dark energy is that it is a property of space. Albert Einstein was the first person to realize that empty space is not nothing. Space has amazing properties, many of which are just beginning to be understood. The first property that Einstein discovered is that it is possible for more space to come into existence.

Much of the damage that ultraviolet radiation (UV) does to skin occurs hours after sun exposure. In the past, experts believed that melanin protected the skin by blocking harmful UV light. But there was also evidence from this study suggesting that melanin is associated with skin cell damage. (Video produced by Patrick J. Lynch and Ziba Kashef)
