Solutions' Manual for Introduction to Linear Algebra, Fifth Edition. Gilbert Strang. Gilbert Strang's textbooks have changed the entire approach to learning linear algebra -- away from abstract vector spaces to specific examples of the four fundamental subspaces: the column space and nullspace of  $A$  and  $A'$ . This new fifth edition has become more than a textbook for the basic linear algebra course.

Linear algebra moves steadily to  $n$  vectors in  $m$ -dimensional space. We still want combinations of the columns (in the column space). We still get  $m$  equations to produce  $b$  (one for each row). Those equations may or may not have a solution. They always have a least-squares solution. The interplay of columns and rows is the heart of linear algebra.
