Sheath removal and hemostasis — manual compression. After the catheterization and the patient is stable, the sheath can be pulled on the table, stretcher, or in the recovery area. When pulling the sheath, first prepare the area; clear away equipment, syringes, and tubing. Consider whether the patient may need more analgesia or local anesthetic.

Frederick Grine is the most wonderful professor on the Stony Brook Campus. It is difficult material but he wants you to do well - if you put in the time you will. His tests are detailed but very fair and straightforward. He's too impressive to be teaching introductory anatomy but he acts like he likes it. Def look at past exams.
