SMT (also called HyperThreading or HT) is a feature that is supported on Check Point appliances running Gaia OS. When enabled, SMT doubles the number of logical CPUs on the Security Gateway, which enhances physical processor utilization. When SMT is disabled, the number of logical CPUs equals the number of physical cores.

The install went fairly smoothly, except for my battery which needed to be boosted. Other than that, it starts and runs beautifully. I'm using this in conjunction with a J&S Safeguard. I can't really do much for tuning until I get a wideband o2 sensor, which I will be getting from the group buy sometime soon.
