Modularity doesn't depend upon any framework. It's upto you, how you design modularity in your application. I think if your application does have the following style:

1. Fully modular
2. Purely Layer based
3. Written in Java (as far as I know )

Then you can easily convert to OSGi.

encapsulation helps achieve loose coupling and modularity in application designs, since objects and packages can be replaced with alternative implementations so long as the same interface is maintained. In classes, encapsulation is achieved by limiting outside access to the class's internal state.
