In probability theory and statistics, the binomial distribution is the discrete probability distribution which gives only two possible results in an experiment, either Success or Failure. For example, if we toss a coin, there could be only two possible outcomes: heads or tails and if any test is taken then there could be only two results: pass or fail.

Calculate the pressure in the hose, given that the absolute pressure in the nozzle is $1.01 \times 10^5 \text{ N/m}^2$ $1.01 \times 10^5 \text{ N/m}^2$ (atmospheric, as it must be) and assuming level, frictionless flow. Strategy Level flow means constant depth, so Bernoulli's principle applies.

Bernoulli's Equation - University Physics Volume 1 - OpenStax

Conservation of energy applied to fluid flow produces Bernoulli's equation. The net work done by the fluid's pressure results in changes in the fluid's and per unit volume. If other forms of energy are involved in fluid flow, Bernoulli's equation can be modified to take these forms into account.
