`int size = v.size();` triggers a warning, as not every return value of that function (usually a 64 bit unsigned int) can be represented as a 32 bit signed int. `int size = static_cast<int>(v.size());` would always compile cleanly and also explicitly states that your conversion from `std::vector::size_type` to `int` was intended. Note that if the size ...

For instance, if a vector has a magnitude of 20 Newtons , then it is a force vector. If it has a magnitude of 25 m/s then it is a velocity vector. The magnitude simple states the quantity, or how big the vector is. This is often described in the length of the vector, but not necessarily. The difference between vectors used in physics and those ...

What is an MP4 (MPEG-4) file? MPEG-4 (MP4) is a container video format that can store multimedia data, usually audio and video. It is compatible with a wide range of devices and operating systems, using a codec to compress file size, resulting in a file that is easy to manage and store. It is also a popular video format for streaming over the Internet, such as on YouTube.
